

REALITY MOVIES

Art, the mirror for an advancing society, can reflect every aspect of our life. Movies, the most popular cultural medium, impact people's life in personal ways. Viewed by millions of people, movies can create a fantasy world or they can depict the **cruelty** of the real world. An *Inconvenient Truth* is one of the excellent productions, which **unveils** the seriousness of climate change. Today's younger generation has no choice but to **confront this crisis head-on**. This movie **rings the alarm** that our climate will change the course of history **far beyond our imagination**. As the producer of this movie suggest it is far more than a simple environmental problem to solve. The main theme of this movie is that people around the world need to work together in order for this problem to be solved.
