

## PRE-SCHOOL EDUCATION

Pre-school education constitutes the crucial stage for children's early development since it occurs at the time when children are learning basic social skills and building self-confidence. The benefits of pre-school education are that they provide students with the opportunities to take part in group activities and learn the basics of education before officially attending primary schools. One feature of pre-school education is that educators need to combine interesting subject matter with practical knowledge, in order to ensure that young students will not be tired of studying even before they step into the first grade. As a result, during the early stages of education, students are encouraged to learn from playing in conjunction with studying. Obviously, this learn-while-play process requires much more patience and a higher skill from teachers.

## **constitutes the crucial stage**

重要的阶段，可以在一定场景下替代play an important role。
